

MANUFACTURING PROPERTIES OF MATERIALS

J. M. Alexander & R. C. Brewer - Imperial College of Science and Technology, London

D. Van Nostrand Company Ltd., London, 1963

CONTENTS

PREFACE V

CHAPTER 1 THE MECHANICAL AND PHYSICAL PROPERTIES OF MATERIALS

1.1 Introduction 1

1.2 Standard Mechanical Tests 3

1.2.1 Tensile Tests 3

1.2.2 Hardness Tests 6

1.2.3 Creep Testing 10

1.2.4 Fatigue Tests 12

1.2.5 Impact Testing 15

1.3 The Basic Stress-Strain Curve 17

1.3.1 General Concept 17

1.3.2 Compression Testing 18

1.3.3 Work-Hardening, Work-Softening, and the Bauschinger Effect 24

1.3.4 Effect of Temperature and Rate of Strain 26

1.3.5 Anisotropy and Aelotropy 28

1.4 Physical Properties of Importance in Manufacture 29

CHAPTER 2 METALLURGICAL CONSIDERATIONS

2.1 Introduction 35

2.2 The Solidification of Metals 36

2.2.1 The Crystallization Process 36

2.2.2 The Atomic Lattice 37

2.2.3 The Crystal Structure 43

2.2.4 Equilibrium Diagrams 50

2.3 The Effects of Heat Treatment	61
2.3.1 Solid Solutions and Precipitation	61
2.3.2 Age-Hardening	61
2.3.3 Quenching and Tempering Steels	63
2.3.4 Annealing and Normalizing	68
2.4 The Role of Dislocations and other Defects in the Lattice	69
2.4.1 The Mechanism of Plastic Deformation	69
2.4.2 The Dislocation	72
2.4.3 Hardening, Recrystallization, and Recovery	76
2.4.4 Creep, Sharp Yield Point, and Strain-Ageing	80
2.5 General Relations between Metallurgy, Deformation, and Properties	83
2.5.1 The General Effects of Metallurgical Composition and Heat Treatment on Final Properties	83
2.5.2 The Interrelation Between Cold-Working, Grain Structure, and Properties	84
2.5.3 The Interrelation Between Hot-Working, Grain Structure, and Properties	86

CHAPTER 3 NON-METALLIC MATERIALS

3.1 Introduction	91
3.1.1 The Ionic or Heteropolar Bond	92
3.1.2 The Covalent or Homopolar Bond	93
3.1.3 The Secondary Valence or Cohesive Bond	94
3.2 Organic Materials	95
3.2.1 Thermoplastic and Thermosetting Resins	100
3.2.2 Fillers and Plasticizers	101
3.2.3 Properties of Plastics	102
3.3 Rubbers	109
3.3.1 Natural Rubber	109

3.3.2 Synthetic Rubbers 109

3.3.3 Elastomers 110

3.4 Refractory Materials 112

3.5 Glasses 122

CHAPTER 4 FORMING FROM THE LIQUID PARTICLE STATE

4.1 Introduction 128

4.2 The Casting Processes 129

4.2.1 Casting with Non-Metallic Moulds 129

4.2.2 Casting with Metallic Moulds 132

4.2.3 Continuous Casting 134

4.2.4 Summary of Processes 134

4.3 The Mechanism of Solidification 136

4.3.1 Solidification of a Pure Metal Casting 136

4.3.2 The Solidification of an Alloy Casting 141

4.4 Contraction and its Consequences 144

4.5 The Solution of Gases in Metals 146

4.6 Powder Metallurgy 147

4.6.1 Production of Powders 149

4.6.2 Pressing or Compacting 150

4.6.3 Sintering of Single-Phase Systems 155

4.6.4 The Growth of the Weld Necks 157

4.6.5 Closure of the Channels 163

4.6.6 Densification 164

4.6.7 Sintering of Two-Phase Systems 170

4.6.8 Hot Pressing 173

4.7 Plastics Forming and Moulding 174

4.7.1 Moulding Processes 174

- 4.7.2 Extrusion Processes 177
- 4.7.3 Sheet-Forming Processes 182
- 4.7.4 Calendering 184

CHAPTER 5 ELEMENTS OF THE THEORY OF PLASTICITY

- 5.1 General Theory 190
- 5.2 Plane Strain-The Slip-Line Field 201
- 5.3 Velocity Discontinuities 208
- 5.4 Stress Discontinuities 209
- 5.5 Prager's Geometrical Method 210
- 5.6 Limit Analysis 215
- 5.7 Instability 220

CHAPTER 6 DEFORMATION PROCESSES

- 6.1 Introduction 229
- 6.2 The 'Large-Scale' Metal Working Processes 231
 - 6.2.1 Forging 231
 - 6.2.2 Extrusion 239
 - 6.2.3 Rolling 256
 - 6.2.4 Seamless Tube Making 267
- 6.3 The 'Small-Scale' Metal-Working Processes 270
 - 6.3.1 Extrusion, Forging, and Coining 270
 - 6.3.2 Cold Rolling 276
 - 6.3.3 Wire- and Tube-Drawing 289
 - 6.3.4 Pressing and Deep-Drawing 301
- 6.4 Other Metal-Working Processes 308

CHAPTER 7 METAL-REMOVAL PROCESSES

- 7.1 Introduction 314
- 7.2 The Machining Processes 314

- 7.2.1 Chip Formation 315
- 7.2.2 Stress, Strain, and Work Done in Machining 320
- 7.3 Orientation of the Shear Plane 323
- 7.4 Single and Multi-Point Tools-Oblique Cutting 335
- 7.5 Cutting Fluids 338
- 7.6 Tool Failure 340
 - 7.6.1 Crater Wear on the Rake Face 341
 - 7.6.2 Clearance Face or Flank Wear 341
- 7.7 Empirical Cutting Force Relationships 345
- 7.8 The Micro-Chip Processes 346
- 7.9 Shearing, Pressing, and Stamping 346
 - 7.9.1 Results with Zero Clearance 347
 - 7.9.2 Results with Finite Clearance 348
- 7.10 Recent Innovations in Metal Removal Methods 349

CHAPTER 8 FABRICATION PROCESSES

- 8.1 Introduction 353
- 8.2 Fusion Welding Processes 354
 - 8.2.1 Electric Arc Welding 354
 - 8.2.2 Gas Welding 356
 - 8.2.3 Methods Employing Exothermic Changes 357
 - 8.2.4 Methods Using an Electron Beam 361
 - 8.2.5 Methods Using the Direct Heating Effect of an Electric Current 362
- 8.3 Pressure Welding Processes 363
 - 8.3.1 Cold Pressure Welding 364
 - 8.3.2 Pressure Welding Processes which Use a Heat Source 372
- 8.4 Brazing and Soldering 377
- 8.5 Joints with Non-Metallic Materials 379

CHAPTER 9 IMPORTANT PROPERTIES IN PRODUCTION PROCESSES AND THEIR DETERMINATION

9.1 Introduction 383

9.2 Forming from the Liquid and Particle State 384

9.2.1 Casting 384

9.2.2 Powder Metallurgy and Ceramics 389

9.3 Deformation Processes 390

9.3.1 The 'Large-scale' Metal-working Processes 390

9.3.2 The 'Small-scale' Metal-working Processes 392

9.4 Machining Processes 397

9.5 Welding 403

9.5.1 Welding Tests 404

CHAPTER 10 THE EFFECT OF PRODUCTION PROCESSES ON THE FUNCTIONING OF MATERIALS

10.1 introduction 413

10.2 Forming from the Liquid State 414

10.3 Forming from the Particle State 422

10.4 Deformation Processes 424

10.4.1 The 'Large-scale' Metal-working Processes 424

10.4.2 The 'Small-scale' Metal-working Processes 429

10.5 Metal-Removal Processes 431

10.6 Fabrication Processes 443

10.7 Heat-Treatment 456

10.8 Discussion 461

APPENDIX 467
