

THE COLD FORGING OF STEEL

A report prepared by a sub group of the International Cold Forging Group

CONTENTS

Introduction

1 Punches and Mandrels

1.1 Design.Gmeral

1.2 Design Rod and Tube Extrusion

1.2.1 Design of Rod Punches

1.2.2 Design of Tube Extrusion Punches and Mandrels

1.2.2.1 Integral Punch and Mandrel

1.2.2.2 Punches with Inserted Mandrel

1.3 Design of Can Punches

1.3.1.1 Short Can Punches

1.3.1.2 Long Can Punches

1.3.2 Overall Design Rules for Can Punchcs

1.3.3 Counter Punchcs for Can Extrusion

1.4 Material Selection

1.5 Manufacture

1.5.1 Material Quality and Control

1.5.2 Initial Machining of Steel Tools

1.5.3 Heat Treatment

1.5.4 Finish Machining

1.6 Operational Aspects

1.6.1 Maintenance and Start-up Procedure

1.6.2 Failures and their Causes (Troubleshooting)

1.6.2.1 Pick-up and Wear

1.6.2.2 Plastic Deformation

1.6.2.3 Fracture

1.6.3 Monitoring Systems

2. Dies

2.1 Design General

2.1.1 Operating Extrusion Pressure

2.1.2 Overall Configuration of the Assembly and Geometry

2.1.3 Material

2.2 Rod and Tube Extrusion Dies

2.2.1 Die with One-piece Insert

2.2.2 Die with Axially-split Insert

2.2.3 Die with Transversely-split Insert

2.3 Can Extrusion Dies

2.3.1 Die with Counterpunch

2.3.1.1 One-piece Insert

2.3.1.2 Transversely-split Insert

2.4 Material Selection

2.5 Manufacture

2.5.1 Steel Die Inserts

2.5.1.1 Material Quality and Control

2.5.1.2 Initial Machining

2.5.1.3 Heat Treatment

2.5.1.4 Finish Machining

2.5.2 Cemented Carbide Die Inserts

2.5.3 Stress Rings

2.5.3.1 Material Quality and Control

2.5.3.2 Initial Machining

2.5.3.3 Heat Treatment

2.5.4 Assembly of Die Inserts and Stress Rings

2.6 Operational Aspects

2.6.1 Maintenance

2.6.2 Failures and Their Causes (Troubleshooting)

2.6.2.1 Pick-up and Wear

2.6.2.2 Fracture of Inserts

2.6.3 Monitoring Systems
