

PLASTICITY FOR MECHANICAL ENGINEERS

Prof. W. Johnson¹ & P. B. Mellor²

1 Manchester College of Science & Technology, 2 University of Liverpool

D. Van Nostrand Company Ltd., 1962

CONTENTS

PREFACE 5

CHAPTER I - INTRODUCTION

- 1.1 Phenomenological Nature of the Theory of Plasticity 1
- 1.2 The Load-extension Diagram in Simple Tension 1
- 1.3 The True Stress-Strain Diagram in Simple Tension 3
- 1.4 Some Deviations from the Stress-Strain Curves Described Above 5
- 1.5 The Effect of Rate of Straining, Ambient Temperature and Hydrostatic Pressure on the Flow and Fracture of a Material 7
- 1.6 The Theory of Elasticity in Isotropic Solids 11
- 1.7 The Theory of Plasticity 12
- 1.8 Empirical Equations to Stress-Strain Curves 14

CHAPTER 2 - STRESS

- 2.1 Definitions 18
- 2.2 The Equations of Force Equilibrium 21
- 2.3 Couple Equilibrium 23
- 2.4 Three-dimensional Stress Systems 23
- 2.5 Mohr's Circles for Three-dimensional Stress Systems 27
- 2.6 The Shortcoming of Mohr's Circle for Three-dimensional Stress Systems 32

CHAPTER 3 - STRAIN

- 3.1 Infinitesimal Strains as Functions of Displacement 34
- 3.2 A Note on the Strain Tensor 37
- 3.3 The Geometry of Strain 38

CHAPTER 4 - THE YIELD CRITERIA OF METALS

- 4.1 General Considerations 41
- 4.2 Stress Space Representations of Yield Criteria 43
- 4.3 Experimental Evidence for the Tresca and Mises Criteria of Yielding 49
- 4.4 Shear and Volumetric Resilience 51
- 4.5 Isotropic Strain-hardening Materials 53
- 4.6 An Anisotropic Yield Criterion 55

CHAPTER 5 - STRESS STRAIN RELATIONS

- 5.1 The Elastic Stress-Strain Relations 57
- 5.2 The Prandtl-Reuss Equations 58
- 5.3 The Levy-Mises Equations 60
- 5.4 Work-hardening 61
- 5.5 The Complete Stress-Strain Relations 64
- 5.6 Total Strain Theory 64
- 5.7 The Levy-Lode Variables 65
- 5.8 The Plastic Potential, Flow Rules and the Maximum Work Hypothesis 67

CHAPTER 6 - METHODS OF DETERMINING STRAIN-HARDENING CHARACTERISTICS

- 6.1 Introduction 73
- 6.2 Simple Tension 76
- 6.3 Balanced Bi-axial Tension 76
- 6.4 Rolling and Simple Tension 78
- 6.5 Simple Compression 80
- 6.6 Plane Strain Compression 83
- 6.7 Simple Torsion 85

CHAPTER 7 - ELEMENTARY ANALYSIS OF THE PLASTIC BENDING OF BEAMS

- 7.1 Introduction 91
- 7.2 Simple Theory of Plastic Bending 92

7.3 Residual Stress Distribution 98

7.4 The Collapse Load in Simple Structures 99

7.5 Combined Bending and Tension: Example of Use of a Yield Inequality 104

7.6 The Elastic-plastic Bending of Wide Plates having an Initial Curvature 107

CHAPTER 8 - TORSION OF PRISMATIC BARS OF NON-CIRCULAR SECTIONS

8.1 Elastic Analysis 113

8.2 Plastic Yielding in a Prismatic Bar 130

8.3 Residual Stresses in Plastically Twisted Shafts 135

CHAPTER 9 - ELASTIC-PLASTIC PROBLEMS WITH SPHERICAL OR CYLINDRICAL SYMMETRY

9.1 Introduction 140

9.2 Thick Hollow Spheres 141

(i) Elastic Stress Distribution: Steady State Temperature Gradient only

(ii) Elastic Stress Distribution: Internal Pressure Only

(iii) Elastic Stress Distribution: Internal Pressure and a Steady State Temperature Gradient: Onset of Yielding

(iv) Partly Plastic Shell: Internal Pressure Only

(v) Partly Plastic Shell: Temperature Gradient Only

(vi) Stress in a Sphere Due to a Uniform Heat Source

9.3 Thick Circular Cylinders 154

(i) Elastic Stress Distribution: Any Steady State Temperature Gradient

(ii) Elastic Stress Distribution: Steady State Heat Flow: Constant Temperature Difference between the Cylinder Walls

(iii) Elastic Stress Distribution: Internal Pressure Only

(iv) Elastic Stress Distribution: Steady State Temperature Gradient and Internal Pressure

(v) Brittle Failure

(vi) Ductile Yielding

(vii) Elastic-plastic Tube: Internal Pressure Only

(viii) Determination of the Pressure-expansion Curve in a Thick-walled Tube

(ix) Thermal Shock

(x) Special References

9.4 Rings Subject to a Steady State Radial Temperature Gradient Only 162

9.5 Rotating Discs 163

CHAPTER 10 - PLASTIC INSTABILITY

10.1 General Considerations of the Buckling of an Ideal Column 170

10.2 The Double-modulus Formula 173

10.3 The Tangent-modulus Formula 175

10.4 A Comparison between the Two Solutions for the Plastic Buckling of a Column with a Rectangular Cross-section 175

10.5 General Considerations of Plastic Instability in Tension 177

10.6 Plastic Instability of a Thin-walled Pipe or Cylinder Subjected to Internal Pressure 181

10.7 Plastic Instability of a Spherical Shell Subjected to Internal Pressure 184

10.8 Instability of a Circular Metal Diaphragm 185

10.9 The Ultimate Strength of Thin-walled Shells and Circular Diaphragms subjected to Hydrostatic Pressure 189

10.10 Empirical Equations to represent the Stress-Strain Curve 194

CHAPTER 11 - MECHANICS OF METAL-FORMING I

Elementary Theoretical and Descriptive Accounts of Tube-sinking, Deep-drawing, Wire-drawing, Extrusion and Cold-rolling.

11.1 Introduction 197

11.2 The Sinking of a Thin-walled Tube: General Considerations 197

11.3 Frictionless Tube-sinking 201

11.4 Tube-sinking with Wall Friction 202

11.5 Comparison of Theoretical and Experimental Stresses in Tube-sinking 204

11.6 The Detection and Measurement of Residual Stresses in Cold-drawn Tubes 206

11.7 Deep-drawing of a Circular Blank; General Considerations 208

- 11.8 Pure Radial Drawing 216
- 11.9 Ironing 221
- 11.10 The Re-drawing of Cups 221
- 11.11 Flange Wrinkling in Deep-drawing 225
- 11.12 Wire-drawing 229
- 11.13 Extrusion: General Considerations 236
- 11.14 Determination of Extrusion Pressure 239
- 11.15 Cold-rolling of Strip 243
- 11.16 Some Comments on the Rolling of Metals 250

CHAPTER 12 - THE SLIP-LINE FIELD: THEORY AND EXAMPLES

- 12.1 General Remarks 259
- 12.2 The Stress Equations 263
- 12.3 The Velocity Equations 265
- 12.4 A Simple Slip-line Field for Extrusion through a Perfectly Smooth Wedge-shaped Die of Semi-angle α 266
- 12.5 The Compression of a Block between Rough Rigid Parallel Platens, the Platen Width Exceeding the Material Thickness 270
- 12.6 The Centred-fan Field 279
- 12.7 Examples Using the Centred-fan Field 280
 - (i) Extrusion through a Square Die over a Smooth Container Wall, $r > 0.5$
 - (ii) Extrusion through a Smooth Wedge-shaped Die of Semi-angle α where $r \leq \frac{3}{2 \sin \alpha / (1 + 2 \sin \alpha)}$
 - (iii) Extrusion through a Smooth Wedge-shaped Die of Semi-angle α where $r \geq \frac{3}{2 \sin \alpha / (1 + 2 \sin \alpha)}$
 - (iv) Simultaneous Extrusion through Two Orifices in a Square Die

CHAPTER 13 - LOAD BOUNDING

- 13.1 Introduction 287
- 13.2 The Lower Bound Theorem 288
- 13.3 The Upper Bound Theorem 289

- 13.4 Upper Bound Theorem: Elementary Justification 291
- 13.5 Examples of Use of Theorems 293
- 13.6 Friction 310
- 13.7 Forging 311
- 13.8 Extrusion through Curved Dies 311
- 13.9 Temperature Distribution in Extrusion Due to Fast Working 313
- 13.10 Temperature Distribution in Swiftly-worked Metals 314

CHAPTER 14 - MECHANICS OF METAL-FORMING II

- 14.1 Introduction 318
- 14.2 Machining 318
- 14.3 Indenting and Forging with Straight-sided Dies 326
- 14.4 Indenting and Forging with a Flat Punch 330
- 14.5 Opposed Indenters: Forging and Cutting 334
- 14.6 Other Work on Forging 336

CHAPTER 15 CREEP

- 15.1 Introduction 339
- 15.2 The Stages of Creep 340
- 15.3 A Note on Creep Data 344
- 15.4 Treatment of Complex Stress Systems 345
- 15.5 Simple Creep Calculation on a Truss 346
- 15.6 Bending: Creep in Frames 348
- 15.7 Creep of Thick Tubes under Internal Pressure 350

APPENDIX: CRYSTAL PLASTICITY 354
