

# PLANE STRAIN SLIP LINE FIELDS FOR METAL DEFORMATION PROCESSES

W. Johnson<sup>1</sup>, R. Sowerby<sup>2</sup>, R.D. Venter<sup>3</sup>

1 University of Cambridge, 2 McMaster University, Canada, 3 University of Toronto

Pergamon Press 1982.

## Contents

### CHAPTER 1. INTRODUCTION 1

The metal-forming process in history 1

Plane-strain slip-line fields: historical note 1

Physical observations 3

(i) Surface coatings 3

(ii) Surface markings on the metal 3

(a) Mild steel 4

(b) Aluminium 4

(iii) Grids or nets of lines 4

(iv) Heat lines and zones 5

(v) The use of Plasticine and wax 5

(vi) Measurement of friction coefficient 5

(vii) PVC : Chromoplasticity 6

(viii) Defects: Voids or cavities, cracks, De-densification, piping 6

(ix) Anisotropy 6

(x) Thermography 7

(xi) Load-punch travel diagrams 7

(xii) Hardness traverses 7

(xiii) Photoplasticity 7

(xiv) Photostress 7

(xv) Residual stresses 8

(xvi) Photoelasticity 8

(xvii) Temperature-sensitive paints 8

(xviii) Thermocouples 8

(xix) Inserts 9

## CHAPTER 2. GENERAL PLASTICITY THEORY 12

Introduction 12

Strain rate 13

Equilibrium and virtual work equations 15

Surfaces of stress discontinuity 16

Surfaces of velocity discontinuity 16

Maximum work principle 17

Uniqueness 19

Extremum principles 21

Summary 23

Tensor calculus and suffix notation 23

Surfaces of stress and velocity discontinuities 23

Plastic potential and flow rule 24

Representative stress and representative plastic strain increment 25

The extremum principles 26

References 28

## CHAPTER 3. BASIC THEORY OF PLANE PLASTIC FLOW 29

Introduction 29

Stress equations 29

Velocity equations 34

Hencky's First Theorem 36

Hencky's Second Theorem 37

Hodographs 39

Stress plane 40

Requirements for a complete solution 45

References 49

#### CHAPTER 4. APPLICATION TO SPECIFIC PROBLEMS 50

Introduction 50

Construction of slip-line fields 51

Kinds of slip-line fields 56

Stress boundary conditions 56

(i) Stress-free surface 56

(ii) Frictionless interface 57

(iii) Interface with Coulomb friction 57

(iv) Full shearing along an interface 58

Constructing the hodograph 58

Solutions to problems using the upper-bound method 59

References 63

#### CHAPTER 5. APPLICATIONS TO SPECIFIC PROCESSES: BIBLIOGRAPHY 64

Centred-fan fields 64

Pressure vessels 67

Compression 71

(i) Perfectly rough parallel dies 71

(ii) Perfectly rough inclined dies 73

(iii) Frictionless parallel dies 73

(iv) Compression of other than slabs 75

Indentation of a semi-infinite medium 76

Cutting 82

Sheet drawing 85

Extrusion and extrusion forging 92

(i) Inverted extrusion 94

(ii) Extrusion forging	94
(iii) Grid distortion	95
(iv) Energy-dissipation rate	102
Piercing	104
Forging	107
Orthogonal machining	111
Swaging	117
Yielding of notched bars in tension	118
Crack initiation and fracture	121
Bending	123
(i) Cantilevers under concentrated loading	123
(ii) Pure bending of notched bars	126
Rolling	128
Blanking and shearing	131
BIBLIOGRAPHY	134
Books	134
Bibliographies and reviews	138
Theory	139
General	142
Pressure vessels	143
Compression	143
Indenting	145
Cutting	147
Drawing	148
Extrusion	149
Piercing	152
Forging	152

Machining 153

Notched bars pulled in tension 155

Crack initiation and fracture 155

Bending 157

Rolling 158

Blanking, shearing and surface asperities 159

## CHAPTER 6. MATRIX-OPERATOR METHODS FOR SOLVING PLANE-STRAIN SLIP-LINE FIELD PROBLEMS 160

Introduction 160

Governing equations in slip-line-field theory 161

(i) Radii of curvature 162

(ii) Moving coordinates 163

(iii) Velocity equations 165

Series expansion for radii of curvature 166

(i) Definitions: radius of curvature, base point, intrinsic direction 166

(ii) Hencky's second theorem 167

(iii) Series representation of the radius of curvature 169

(iv) Series representation of a circular arc 170

(v) Generalized radius of curvature at a point 171

Centred fans and regular nets 172

(i) Centred fans 172

(ii) Regular nets 175

(iii) Construction on the concave side of the base line 178

Matrix operators 179

(i) Reversion operator,  $R$  179

(ii) Operators  $P$  and  $Q$ : the centred fan: the regular net 180

(iii) Shift operator,  $S$  182

(iv) Numerical application of the operators $R$ and $S$	183
(v) Frictionless boundary operator, $T$	186
(vi) Straight rough boundary operator, $G$	188
(vii) Stress-free surface boundary operator, $F$	189
(viii) Matrix operator identities	190
(ix) Matrix operator subroutines	191
Determination of the coordinates of slip lines	191
Determination of forces acting on a slip line	197
Method of solution	201
(i) Direct-type solutions	202
(ii) Indirect-type solutions	202
Application of the matrix operator method to the solution of direct-type problems	203
(i) Extrusion/drawing through a frictionless wedge-shaped die	203
(ii) Extrusion at high reduction	208
(iii) Symmetrical and asymmetrical piercing examples	209
(iv) Slip-line fields for drawing and wall-ironing	213
Application solution of the matrix operator method to the indirect-type problems	218
(i) Range of slip-line-field solutions for extrusion/drawing through frictionless wedge-shaped dies	219
(ii) Drawing through rough wedge-shaped dies	231
(iii) Slip-line-field solutions for the hot rolling of strip	233
Summary	242
Summary of matrix operators	244
References	246
Appendix 1	249
Matrix operators	249
Appendix	256

Mikhlin and Cartesian coordinates of a slip line 256

Determination of expressions for the Mikhlin coordinates 257

Appendix 3 259

Computer listing for indentation problem 259

Appendix 4 263

The determination of the forces acting on a slip line: subroutine SLFORC 263

CHAPTER 7. PLASTICITY PROBLEMS FOR OTHER THAN PLANE-STRAIN CONDITIONS 266

Introduction 266

The method of characteristics for other than plane strain processes 267

(i) Plane stress 267

(ii) Axial symmetry 275

(iii) Soils 278

Anisotropy 283

(i) Crystallographic approach 285

(ii) Macroscopic theories of anisotropy 294

(iii) Slip-line fields for anisotropic materials 307

Analogies with metal-working operations 309

(i) Minimum weight frames 309

(ii) The transverse plastic bending of rigid-perfectly plastic plates 317

(iii) The force-plane diagram for planestrain slip-line fields 319
